

Bulwark Systems - Network Monitoring Solution

Highlights

SecuraNET NMS is a strong, enterprise-grade, network monitoring solution.

Reduced administration overheads compared to other solutions

Custom report generation via SecuraNET Reports

Features performance monitoring and trend analysis tools

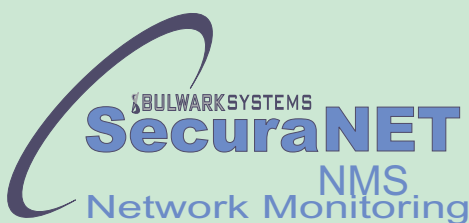

Support for all common network devices, services and operating systems

Detailed Inventory and Asset Management module (optional)

Web browser based total management console

SecuraNET NMS supports SNMP 1,2c and 3

Application Monitoring available for market leading software solutions.

Benifits

Business faces the challenge of delivering more effective IT with smaller budgets. SecuraNET NMS delivers significant cost saving over proprietary network monitoring software.

Centralized monitoring shifts focus from fire-fighting to forward planning. IT problems can be identified and dealt with before they impact on business operations. Long term monitoring of trends and service levels facilitates more accurate capacity planning and budgeting.

Integrated Reporting Tool

Graphical representation of performance and trend data is provided for service checks.

Historical performance and event data are recorded for later analysis.

Server Requirement

Hardware requirements depend on the quantity of devices to be monitored, the number of service checks per device and the volume of performance data to be stored.

Application Monitoring

Most of the applications relating to Web server, Web application server, ERP, CRM Groupware are covered in this module.

SNMP Support

SNMP 1, 2c and 3 are supported. It is capable of both active polling and SNMP trap processing.

Easy Administration

SecuraNET NMS eases the configuration and management of Networks.

Automated integrity checking and configuration backup ensures the reliability of your monitoring system.

Scalable

Distributed monitoring provides federated network monitoring across multiple sites.

Network Services

SecuraNET is capable of monitoring all common network services, including:

DNS, FTP, HTTP, NFS, NTP, LDAP, POP3, SNMP, SSH, Syslog and Telnet also basic layer 3 and 4 monitoring is possible.

Network Devices

SNMP MIB-II compliant devices can be monitored. International network appliances like 3Com, Cisco and APC etc can be monitored.
